Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

This action is in response to the original filing of September 3, 2004. Amended claims 1-10 are pending and have been considered below.

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.
2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claims 7-9 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Art Unit: 2109

Claims 7-9: Claims 7-9 are drawn to a computer program per se. A computer program is not a series of steps or acts and this is not a process. A computer program is not a physical article or object and as such is not a machine or manufacture. A computer program is not a combination of substances and therefore not a compilation of matter. Thus, a computer program by itself does not fall within any of the four categories of invention. Therefore, Claims 7-9 are not statutory.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Ueda et al. (US2001/0005442).

Claims 1, 4, and 7: Ueda discloses an information edition device, method, and program, comprising:

a. a first selecting device for selecting a thumbnail image from images corresponding to image information, the thumbnail image showing contents of recorded

Art Unit: 2109

information which includes at least the image information and is recorded on a recording medium (page 5, paragraph 65);

b. a second selecting device for selecting the thumbnail image from images other than the images corresponding to the image information in the recorded information (page 5, paragraph 65);

c. a recording device for recording first position information and second position information on the recording medium, the first position information indicating on the recording medium a recording position of image information corresponding to the image selected by the first selecting device, the second position information indicating on the recording medium a recording position of image information corresponding to the image selected by the second selecting device, a thumbnail image specifier effective flag showing whether any one of the image selected by the first selecting device is specified as the thumbnail image or any one of the image selected by the second selecting device is specified as the thumbnail image (page 4, paragraph 55);

d. the apparatus edits a reproduced form of the recorded information recorded on the recording medium (page 5, paragraph 67).

Claims 2, 5, and 8: Ueda discloses an information edition device, method, and program, as in Claims 1, 4, and 7 above, further comprising:

a. the thumbnail image selected by the second selecting device is an image obtained from external image information or an image recorded beforehand on the

Art Unit: 2109

recording medium other than the images corresponding to the image information in the recorded information (page 3, paragraph 73).

Claims 3, 6, and 9: Ueda discloses an information edition device, method, and program, as in Claims 1, 4, and 7 above, further comprising:

a. when another image is selected by the second selecting device after the second position information is recorded, the recording device rerecords a recording position of image information, which corresponds to the additionally selected image, as new second position information on the recording medium (page 3, paragraph 73).

Claim 10: Ueda discloses an information edition recording medium for recording the information editing program according to Claim 7 (page 2, paragraph 36).
